1.3%
Average monthly return

93
Months in view

Average annualized volatility by sector

30-day volatility over time (annualized)

Each sector is the equal-weighted average of 9 stocks I picked from today's S&P 500 list. Companies that left the index are not in my data (survivorship bias), so results likely look better than a full list would. Monthly returns use each stock's last trading day of the month. Volatility is the 30-day standard deviation of daily returns, scaled to a year. This shows what happened in my data. It does not predict anything.

Drawdown and recovery by selloff

Select a selloff

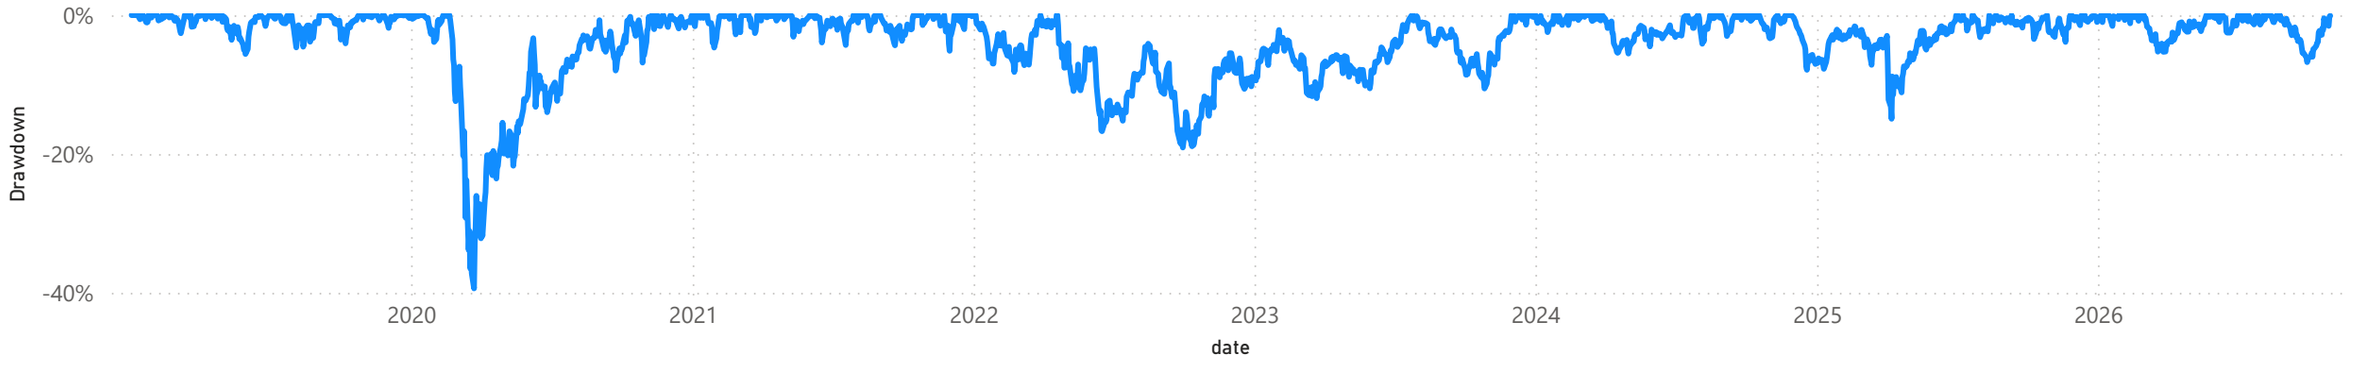

Selloff 1: Feb 2020 to Nov 2020

-39.38%
Market Depth

22
Trading days to fall

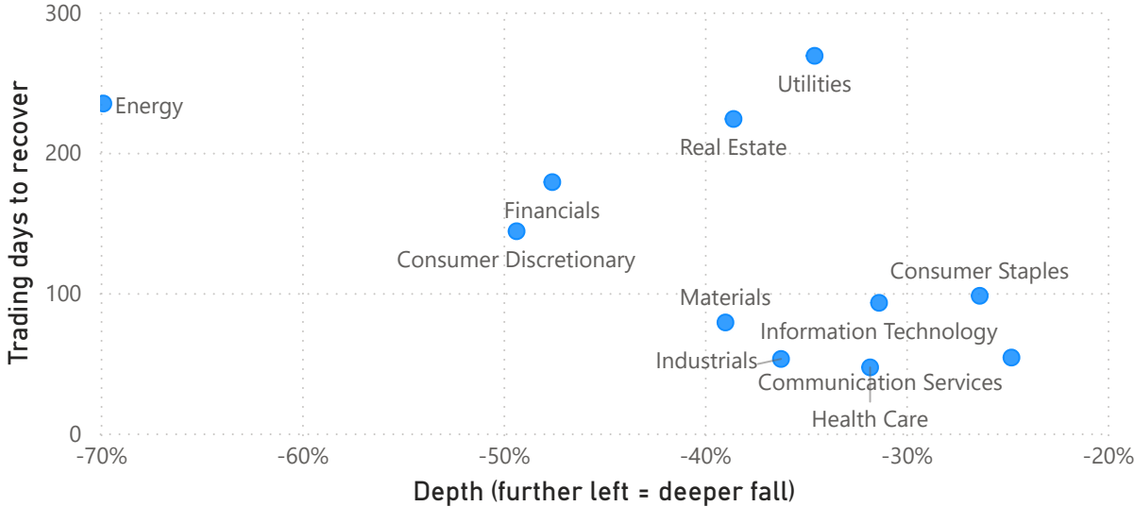

161
Trading days to recover

Market drawdown from its highest level so far (equal-weighted index of my 99 stocks, all years)

Sector	Depth	Days to fall	Days to recover
Utilities	-34.55%	22	269
Energy	-69.86%	19	235
Real Estate	-38.57%	22	224
Financials	-47.57%	22	179
Consumer Discretionary	-49.35%	19	144
Consumer Staples	-26.35%	17	98
Information Technology	-31.35%	22	93
Materials	-38.97%	22	79
Communication Services	-24.77%	21	54
Industrials	-36.22%	22	53
Health Care	-31.79%	22	47

Depth vs days to recover, by sector

Depth = how far the sector's level fell below its level on the market's peak day. Days to recover = trading days from the sector's own bottom back to that level.

Interest rates (percent)

Inflation: CPI vs the same month a year earlier

Average monthly return of the selected sector(s)

Monthly numbers (fed funds rate, inflation, unemployment) are matched to every trading day in the month they describe, not the day they were published. The 10-year yield is daily, and on holidays I carry the last value forward. October 2025 and October 2026 have no monthly values, so they show as gaps. This shows what lined up in my data. It does not show that rates or inflation caused any sector's moves.
